Shifting from office to work from home environment during this difficult time, we wanted to ensure that as a Managed Service Provider, we are taking the necessary measures to proactively protect you and your employees. Working remotely has its perks, but also comes with distractions and risks.

- [COVID-19 scams](#) pose a major threat
- [Phishing](#) emails taking advantage of the **FEAR** of COVID-19 by spoofing well-known organizations like the World Health Organization
- [Malicious](#) virus-tracking maps that infect those trying to keep tabs on the virus' movement
- Increase in [cyberattacks](#) on vital agencies- Department of Health and Human Services (HHS)

Human security is crucial now more than ever because employees are more likely to let their guard down when they're in the comfort of their own home. Do you trust your employees to verify payment requests, take device security seriously, and properly identify phishing emails without coworkers to consult?

In order to do our part during this crisis we are currently offering three educational **services at no charge to you:**

1. **A free cybersecurity training course** – to remind employees of the appropriate security protocols while they work at home.
2. **A complementary dark web scan** of your domain - are any of your company credentials compromised?
3. **A baseline phishing simulation** - how do your employees apply their knowledge and do they need any additional training

Call us to set up your services today!

Thank you,

Ron Koty,  
President DataKloud
